

PREFORM CASA

THE ACOUSTIC SOLUTION FOR VIDEO CALLS

PREFORM CASA CREATES A QUIET ENVIRONMENT FOR VIDEO CALLS, ALLOWING HYBRID WORK MODELS TO BE IMPLEMENTED.

Today, hybrid meetings make up more than half of all meetings. Not all offices are designed to conduct uninterrupted video calls under perfect conditions. That is why we are excited to introduce PREFORM Casa, a professional retreat for your office that facilitates spontaneous and flexible video calls and at the same time stands out for its great design. Colleagues who are not participating in the meeting will not be disturbed.

PREFORM Casa creates a quiet environment for video calls, allowing hybrid work models to be implemented.

Since the Corona pandemic, hybrid work models are more important than ever. The associated opportunities for employers and employees are enormous. Fixed costs for companies, which arise from large office spaces, for example, can be reduced, but employees also benefit from more flexible working hours, for example.

The changing work models and the associated hybrid forms of communication are creating new requirements for working in open space offices.

Video conferencing, which has established itself in the modern working world, plays an essential role in everyday working life. Video conferencing requires acoustic solutions close to the workplace so that non-participating colleagues are not disturbed. PREFORM Casa was developed as a professional place for digital meetings and makes video conferencing more spontaneous and flexible.

With PREFORM Casa, the acoustics expert PREFORM creates optimal conditions for video conferencing. The openly designed retreat conveys security and ensures optimized acoustics. Sound propagation and audibility are minimized by a partially open pitched roof and near-sender sound absorption.

Compared to closed systems, the space requirement is lower. In addition, the video workstation is quickly set up - from professional background to optimal lighting conditions.

ABOUT PREFORM – the specialist for optimal room acoustics

PREFORM ensures that time spent at the workplace is as pleasant as possible. With over 40 years of experience and quality „Made in Germany“ we create innovative acoustic solutions for your office. Individually adapted, these enable an optimal noise environment at the workplace. After all, a harmonious working environment not only contributes to our physical well-being, it also increases concentration, performance and creativity.

The PREFORM vision is to build a sustainable office world with innovative acoustic solutions that flexibly adapt to the workspaces of the future.

PREFORM CASA AT A GLANCE:

- Minimization of sound propagation and audibility through partially open pitched roof and near-sender sound absorption
- 1.57" wall thickness with 1.5" acoustically effective gypsum foam filling - Made in Germany
- No ventilation necessary
- Fits existing grid dimensions and requires less space compared to closed systems
- Dimensions: 77.8"W x 58.5"D x 88"H
- Can be combined with sit / stand workstation
- Wide range of colors
